

*COMPETITION SHOTGUNS*

**KRIEGHOFF**

*Krieghoff's K-80 has a particularly unique reputation in the global target shooting community. Not only is it of historical significance, but to this day it continues to set benchmarks. Personal experience and an intensive dialogue with sporting shooters around the world drive the ongoing dynamic enhancement of this successful competition shotgun.*

*This catalog presents an insight into the fascinating world of the K-80 and K-20, together with their history.*

*We hope you enjoy browsing through its pages!*

# THE K-80 STORY

Ulm, Germany 1954: Krieghoff had just started manufacturing firearms again when L. M. Donaldson, who had won several trapshooting championships in the United States, traveled to the nascent Republic of Germany looking for a competent gunsmith. In his luggage, the American topsooter had a concept for a competition shotgun, which he wanted to have made in Germany. His German partner, Viktor Brandl, subsequently introduced him to Heinrich and Heinz-Ulrich Krieghoff.

It did not take Krieghoff long to realize the particularly enormous potential of the American sporting gun market. Donaldson's idea was therefore quickly transformed into reality.

In the 30s, Remington had developed its model 32, a true competition shotgun. However, the company stopped manufacturing this complex firearm shortly after it was introduced.

The basic design of this forerunner of all competition shotguns was now used as the starting point for the Ulm-based gunmakers' shotgun project. Its name, K-32, gives away its origins. The characteristic shape of the action is another feature that makes its ancestry undeniable, and is surely one of the key reasons for the legendary durability of these shotguns: The hinge, well forward and positioned high, minimizes the forces to which this bookless action is subjected. Shooting well over one million rounds from a shotgun may sound like a tall tale, but such numbers have actually been achieved by many K-32 and K-80 models. The entire lock and trigger mechanism were completely redesigned. The excellent, selective single trigger with a reliable, mechanical selector dates back to the first K-32.

The design of the barrel set left no room for doubt that the K-32 was made for sport shooting: The barrels were completely exposed and adjustable, one to the other. In early years, when choke tubes were not yet available, Krieghoff promoted the fact that it offered 30 different barrel configurations for the K-32.

Right from the start, Krieghoff's concept for sporting guns included optimizing them for the respective discipline and perfectly aligning them to individual preferences.

Originally, the K-32 contract called for marketing the gun exclusively in the United States, where it attracted a fast-growing following of committed sports shooters. The successes of Kenneth Jones, who in 1966 was able to capture the world trapshooting championship in Wiesbaden with his K-32, and Don Haldeman, who won Olympic gold in Montreal in 1976, are but two examples of the countless sporting events where the K-32's performance was tops.

The lively exchange of ideas and experience with Krieghoff shooters escalated after Dieter Krieghoff emigrated to North America in 1979 and founded Krieghoff International Inc.

This dialogue led to the development of the K-80, an enhanced version of the K-32. At the very top of the list of sports shooters who made a special contribution to the evolution of the Krieghoff competition shotguns is Kay Obye, who has for decades held a top position among America's trap shooters.

His suggestions, together with the experience of many others, have made the K-80 the most flexible and reliable competition shotgun in the world. Lateral adjustment was introduced with the K-80, and the trigger system was further enhanced. The ergonomics of the stocks was also further improved. The adjustable rib for trap barrels for special disciplines was also revolutionary.

Choke tubes increased the flexibility of the barrel set and made the K-80 into an all-purpose gun.

The order for the first 2,000 shotguns and one of the first K-32 competition shotguns

The addition of the K-20 added small gauge capability to Krieghoff's competition shotgun lineup. Slimmer and lighter, it has all the technical features of its 'big sister'. In other words, it really is built for the smaller 20-gauge cartridge and is not just a small gauge barrel set in a normal sized receiver.

The growing international popularity of the K-80 goes hand in hand with the ever-expanding interest in sporting clay shooting in Europe and America. The various versions of the K-80 and K-20 are tied to the success of outstanding shooters such as Andreas Löw (GER), Corey Cogdell (USA), Gebben Miles (USA), Ben Husthwaite (GBR), Mark Winser (GBR), Inna Alexandrova (RUS), Therese Lundqvist (SWE) and Véronique Girardet (FRA) etc.

New models, such as the K-80 Parcours demonstrate the steady momentum in the development of Krieghoff's competition shotguns. Clearly the K-80 story is one that has an excellent future.

Early key players: Hal duPont, Nick Maynard, Viktor Brandl, H.-U. Krieghoff (l to r)

Early triumphs: H. Krieghoff, Kenneth A. Jones, world trapshooting champion 1966 and H.-U. Krieghoff

Don Haldeman wins Olympic gold in Montréal

Kay Obye, legendary trap shooter and important source of inspiration for the enhancement of the K-80

Dieter and Phil Krieghoff represent the fourth and fifth generation of the Krieghoff family

## 'FOREVER YOUNG' KRIEGHOFF'S UNIQUE 'K-ACTION'

*Reliability, durability, flexibility – these characteristics, which have proven their worth in countless competitions, have made the K-80 into a legend.*

*From muzzle to pad, this sporting shotgun is designed to compete. There is no hint of compromise. The development process that accompanies the K-80 from the get go ensures that it is always the most optimized shotgun with the most up-to-date features to meet the high demands of competitions. This is achieved by applying the principle of unconditional compatibility. For example, the current 'Trap Special' barrel set with adjustable rib is not only available for the new K-80 shotguns, but can also easily be inserted into an early K-32.*

### **CHOKES**

*Conventional fixed chokes or choke tubes are optional for every K-80. The knurled and clearly marked choke tubes can easily be replaced in a flash. Titanium choke tubes are also available as an option. Nine inserts, from Cylinder to Super Full, are available for all choke tube sets.*

### **BARRELS**

*Barrels are offered in standard lengths: 71cm, 76cm and 81cm. They are completely exposed; that is, thermally decoupled from one another. The point where the barrels are joined is very easy to adjust. All points of contact on the barrel set are hard soldered to maximize robustness and service life.*

*The chambers are chromed to maximize their life and the long forcing cone reduces the recoil felt by the shooter. The inside profile of the barrel ensures an even pattern and maximizes the speed of the shot column. Every K-80 is tested with steel shot at the factory.*

*This see-through K-80 exposes the interior workings*

### **TOP RIBS**

*The top rib is also hard soldered, which results in a robust, solid joint. All ribs are ventilated and come with a prominent sight with contrast insert and center bead. The shape of the rib is optimized for the various disciplines.*

*Adjustable ribs make it easy to fine-tune the point of impact and adapt it to personal preference.*

### **EJECTORS**

*Unique, robust ejectors with strong, long-lasting coil springs reliably eject spent cartridges.*

### **ACTION**

*The K-80 breech has developed a reputation for being indestructible. In fact, it's true that many of these shotguns have easily been able to fire over a million rounds. Since the action locks without a bottom bite, the receiver design can be shallow. The hinge is very far forward and high, which keeps the leverage generated by firing. The breech plate design is self adjusting and forms a large, very rugged locking area.*

### **TRIGGER**

*Again and again, the trigger characteristics are praised for their perfection. The trigger releases at about 1,500 g, the ideal force. Selection is reliable: purely mechanical, with no recoil. A lever in front of the trigger is used to select the barrel shooting sequence. The length of the trigger shoe can be adjusted to suit the lengths of individual shooters' fingers.*

### **SAFETY**

*The sliding safety is located behind the opening lever. A large pushbutton prevents inadvertent activation. The safety can easily be locked in the 'off' position during competition.*

### **STOCK**

*Optimally designed forearms and comb stocks are available for the K-80 to suit each type of sporting event. The adjustable comb stock can be easily modified to suit individual requirements. It goes without saying that custom stocks can also be ordered very easily. An intuitive and repeatable fit are the priorities when creating the stock components. For example, the pistol grip's palm swell provides a particularly firm and comfortable place to hold the gun. The fine checkering adds to the secure, safe grip.*

### **BALANCE**

*The exceptional balance of the K-80 enhances the shooters' swing, thus ensuring the target is hit when it really counts.*

*The ergonomic arrangement of the top lever has been optimized so that the lock can be opened with minimum effort.*

## *TAILOR-MADE: ENGINEERING AND SERVICE*

*Veronique Girardet's disciplines are sporting clays and skeet. She has won the FI T.A.S.C. world championship in sporting clays shooting multiple times. Her shotgun: the K-80. Because she participates in a wide variety of competitions, the flexibility of her shotgun must be second to none. The stock and ribs are tuned to her personal preferences. Each sporting clay, each stop comes with a unique set of challenges. Choke inserts must be easy to swap – quickly. Veronique Girardet also uses her K-80 for skeet shooting when she competes for the French Olympic team, of which she is a member. With a 71 cm barrel and a comb stock optimized for skeet shooting, the K-80 is as fit for the Olympic discipline as the shooter.*

*This is the one side of the K-80. A comprehensive selection of forearms and comb stocks, three standard barrel lengths and fixed or adjustable ribs enable the shotgun to be easily optimized to match the requirements of each discipline.*

*Every K-80 can also be retrofitted with every component from the entire range of available options. The principle of compatibility keeps every K-80 up-to-date – one factor that of course also contributes significantly to its enduring value.*

*Success factors: undisturbed concentration, the right barrel, optimum bore diameter, a snug stock and effective service when shooting. That's the way to break targets!*

*Another factor makes the K-80 far more than 'just' an excellent shotgun for competition shooting: Shooters who use this gun enter into a partnership in which they are able to transform their skills and opportunities into successes. This demands much more than a reliable design and top quality.*

*Among the soft factors that help the shooter fully focus on the next target is Krieghoff's service team, which is on site at many important competitions with experienced gunsmiths to provide expert advice.*

## K-80: OPTIONS

*Performance and flexibility: the barrel set options for the K-80 make it possible to optimize the configuration for a wide variety of disciplines and to adapt the gun to suit individual preferences.*

*Time and time again, the K-80's barrels have proven their outstanding ability to withstand stress. Every joint is hand soldered. The completely exposed barrels can expand without stress when they heat up. The chambers are always chromed, regardless of the configuration.*

*Beside of the Parcours barrels, the pattern of each barrel can be adjusted to the other by changing the front and center hangers step-by-step.*

*Six different rib shapes provide the right solution for each discipline. The sights consist of a large pearl front sight with white contrast insert and a brass center bead.*

*The 18.6 mm bore diameter makes for high shot speed and efficient patterns. The standard factory steel choke tubes can be quickly changed and have proven themselves in many competitions.*

*Optional titanium chokes are also available.*

*'Sporting' Tapered Flat Rib, 12, 20, 28 and .410, with Titanium Choke Tubes*

*'Trap Special' Adjustable Rib, 12 Gauge, with Titanium Choke Tubes, optional 'Trap Special Pro' version available*

*'ProSporter' or 'Pro Trap' Adjustable Rib, 12, 20, 28 and .410, with Titanium Choke Tubes*

*'Double Trap Special' Adjustable Rib, 12 Gauge, with Titanium Chokes*

*'Trap' Tapered Step Rib, 12, 20, 28 and .410, with Titanium Choke Tubes*

*'Parcours' Taper Flat Soldered Side Rib, 12 Gauge, with Fixed Chokes*

**Andreas Löw**

It's easy to find a Krieghoff which suits your style. My choice is the Krieghoff K-80 with the fully adjustable Double Trap Special Rib for good visibility around the gun and quick target acquisition. The advantages are obvious and the results quite impressive: World Champion Silver medalist after just one year shooting the K-80 Double Trap Special.

## CUSTOM FIT TO NATURE'S SIZE

A shotgun's stock is not only important to its aesthetics, but is also primarily responsible for a key facet of shooting: intuitively picking up the target.

'You shoot with the barrels, you hit with the stock®': Ludwig Krieghoff's observation from over 100 years ago 'bits the mark' when it comes to describing this interrelationship.

He systematically reinforced this inspiration by developing the Krieghoff stock-fitting process, a groundbreaking innovation that was patented as early as 1903.

To this day, Krieghoff stockmakers custom fit K-80 stocks to shooters based on this systematic process.

Fifteen different measurements define the correct dimensions of a stock. This, together with the trained eye and craftsmanship of the stockmaker, is how the superb stock that seems to automatically slide into place is shaped.

Ambitious shooters perfect their own K-80 configuration by demanding a custom made stock – a key requirement when it comes to maximizing the potential for personal performance.

Debbie Ohye, 'Women's All-American Captain' and the most successful female trap shooter ever in the United States being fitted for a new stock for her K-80.

Before shaping the stock, the type of wood must be selected. It takes about eighty years before a stock can be made from the wood of a walnut tree. During this time, nature creates a thing that speaks to the senses with its noble and ever unique grain like almost no other material.

Being able to see from the rather unimposing blank how best to design the stock, how the composition and grain can be best utilized to maximize strength and beauty, is the essence of the risk-taking and flair of an experienced stockmaker.

It takes about sixteen hours to craft a stock with perfect dimensions and an equally perfect finish using a blank from the large assortment in stock inventory.

The high priority Krieghoff places on catering to individual preferences is demonstrated by the stock warehouse, where customers can choose from over 1,000 pieces of wood in all quality grades. The dilemma of which to choose is the customer's, but we are happy to advise.

Once the final shape has emerged from the chiseling and filing, and the stock has been seamlessly fitted to the receiver, finely carved checkering and surface finishing complete the work of art. Classic oiling or epoxying – both methods uniquely enhance the natural beauty of the wood. The end result is a stock that is a pleasure to hold and behold.

# THE HUMAN FACTOR: STOCK CONFIGURATIONS FOR INDIVIDUALS

When it comes to ergonomics, a shotgun's stock is a key component. It is not without reason that every shooter is familiar with Ludwig Krieghoff's observation that 'you shoot with the barrels, you hit with the stock'®. He also developed Krieghoff's patented stock fitting process, which to this day forms the basis of the K-80's customized stocks.

But even the K-80's standard stock designs are optimized for the respective disciplines. Those who want the flexibility of using their K-80 for various disciplines can easily change the stock and forearm. The original forearm can also be used with all interchangeable barrels.

Trap and sporting clay shooters are becoming more and more enamored with adjustable comb stocks. Their vertical and horizontal adjustability enables them to be perfectly adapted to suit personal needs.

The precise checkering and the ergonomic hand-shaped pistol grip are part and parcel of the functional details of stock creation. Even the recoil pad is designed to match the requirements of the respective discipline. The trap recoil pad is specially designed for 'bead up' shooting. The sporting recoil pad is designed for fast gun mounting.

In addition to working like a charm, the stock, which is made from natural wood, contributes significantly to the aesthetic charm of the K-80. Six different grades of wood are available for the stock. The particularly resilient epoxy surface permanently and attractively brings out the warm colors and the fine grain of the walnut.

A special feature for the K-80 is the Krieghoff adjustable butt plate. Allowing for the adjustment of cast, drop and pitch, for a personalized fit.

The K-80 length of pull can be easily adjusted to your personal specifications with the addition of optional pre-fitted 6.4 mm spacers. Combined with the adjustable butt plate, obtaining the perfect gun fit has never been easier.

## *K-80 TRAP*

*Trap is the oldest and most popular target shooting discipline. The sport is played the world over according to a wide variety of rules.*

*The K-80's strengths are especially evident in this discipline: its perfect adaptability to the technical demands of this sport and the personal wishes of ambitious shooters allows them to perform to the absolute best of their individual abilities. Keen concentration translates into winning scores!*

## K-80 TRAP

The unforgiving rules of trap shooting apply equally to amateurs and national team shooters. To reach the upper echelons of this sport, there is no room for careless mistakes.

The K-80 Trap Special is configured to adapt perfectly to the shooter and the particular trap discipline.

The model's new, adjustable rib in particular has very quickly proven its worth. The higher line of sight allows for a better overview and an upright and relaxed shooting stance. The point of impact can be easily adjusted over a wide range using the sight's knurled thumb-screw. The dimensions of the adjustable comb stock are matched to the raised line of sight.

The K-80 Trap Special can thus be ideally fitted to the individual measurements of all shooters, enabling them to take maximum advantage of every opportunity.

K-80 'Trap Special'  
'Standard' engraving and standard wood category

The Trap Special rib is shipped with a standard 70%/30% high shooting pattern. The total adjustment range spans from about 60%/40%; that is, fairly flat, to almost a full 100% high. Also available in the Pro-Version with a range of adjustment from 80%/20% to 120%.

Every K-80 Trap is shipped with five chokes.

K-80 'Trap',  
'Celtic' engraving and wood category 03

Many shooters prefer the original 'classic' configuration of the K-80 Trap. This type has a fixed, taper step 12 – 8 mm rib. For the stock shape, shooters can choose either the 'Monte Carlo Trap' or the 'adjustable Monte Carlo Trap'.

Extended titanium choke tubes are available as an option. Fixed chokes can also be supplied on request.

## *K-80*

### *SPORTING CLAYS, SKEET*

---

*The skeet and sporting clay disciplines present a unique set of challenges to shooters and their shotguns.*

*Again and again, sporting clay shooters are confronted with unfamiliar and difficult targets. A competition shotgun must therefore be flexible enough to allow shooters to prevail in this environment. Gebben Miles (USA) and Ben Husthwaite (GBR) as World F.I.T.A.S.C. Champions, as well as Mark Winser (GBR) and Inna Alexandrova (RUS) along with many others rely on their K-80.*

*And at the Olympic Skeet Championship, the K-80 is the competition shotgun of choice for world champions like Véronique Girardet (FRA) and Therese Lundqvist (SWE).*

## K-80 PARCOURS, SKEET

There is no room for error when trying to hit fast-moving targets traveling at various angles and heights. Shooters who have a gun with stock dimensions and sight picture tailored to their preferences are able to fully focus on what's important: sensing the direction and speed of the target and perfectly synchronizing their own movements. The result: orange dust and the good feeling of having an X added to your card. The K-80 Sporting Clays has ranked high among sporting clay and skeet shooting enthusiasts and successful pros for many years. Its outstanding performance is based upon its flexible configuration options, perfect balance and proverbial reliability.

'Head up' shooting has currently garnered a considerable following, thanks to numerous successes achieved using this style.

The adjustable 'ProSporter' rib makes the K-80 ideal for sporting clays or skeet. The 'ProSporter' rib not only delivers a higher line of sight, for a faster target acquisition and softer perceived recoil, it can be adjusted to the individual's shooting style. This adjustment can be done within seconds. The back of the adjustable comb stock is also higher than that of the sporting clays version and is thus aligned with the top of the 'ProSporter' rib.

The K-80 ProSporter offers maximum flexibility for maximum performance. The shooter and the gun merge into one with this configuration, the elements of which efficiently complement each other.

The higher line of sight allows for a better overview and an upright and relaxed shooting stance. It is very easy to change the point of impact using the sight's infinitely adjustable knurled thumbscrew. The comb stock, also adjustable, can be shifted in two directions: up and down and side to side.

The K-80 ProSporter is available with a 76 cm or 81 cm barrel.

K-80 'Sporting', tapered flat rib, adjustable comb stock, 'Vintage Scroll' engraving, titanium trigger and wood category 02

K-80 'ProSporter' 'ProSporter' top rib, adjustable comb stock, 'K-80 Logo' engraving and wood category 04

Specially designed adjustment wedges fitted under the rib allow the shooter to select a flat shooting 50/50 POI or a slightly higher 60/40 POI. Both POI settings are approximations and can differ slightly. Standard is the 50/50 POI wedge, which can be easily exchanged with the 60/40 POI wedge by a qualified Krieghoff gunsmith.

Extended titanium choke tubes are a favourite accessory. They are available as an option. Fixed chokes can also be supplied on request.

**Ben Hustwaite**

'I have been shooting the K-80 for almost 20 years now and would never consider using anything else, each time I compete I truly believe I have the best gun available in my hands. Over 20 World Championship Medals can't be wrong. Try it – you just may be surprised!'

## *K-80 SPORTING CLAYS, SKEET*

**Stock finish:** Epoxy

## *K-20: GRACEFUL POWER*

*The 'twenty' is considered by many to be uniquely fascinating in its own right. Lean and light, it does not take a back seat in performance to any of the typical 12-gauge shotguns.*

*The K-20 is a true Krieghoff in all respects. All the features of the legendary K-80 action can also be found in the K-20, adapted only for the different gauge. The outside dimensions of the receiver have also been reduced accordingly. Therein lies the reason for the fascinating, lean shape and excellent balance of the shotgun.*

*Whether it be for sporting clays, skeet or in the field, the K-20 shines.*

# K-20

An elegant and compact K-20 action is the heart of every Krieghoff shotgun for sporting clays, skeet and in the field – that is the essence of the K-20.

Everything about the K-80 that has made it a legend can also be found in the K-20. This applies not only to the rugged action with its outstanding triggers, but also the versatility that enables the K-20 to be configured to suit every individual's preferences. In addition to different types of stocks, the barrel combination options cover the entire spectrum of small gauges. In fact, the K-20 could actually also be called the K-20/28/.410.

The technical design of the K-20 barrel set types matches that of the K-80.

Nor are there any fewer choices when creating a dream K-20. Shooters can select from the entire range of standard engravings, and at Krieghoff, there are never any limits anyway when it comes to custom design wishes.

K-20 gauge options:  
.410 (top), 28/76 (middle), 20/76 (bottom)

BARREL OPTIONS FOR THE K-20	20/76	28/76	.410

**Barrel length:** 76 cm, taper flat rib

**Choke tubes:** factory chokes

**Forearm:** 'Schmabel'

**Sporting stock**

**Standard engraving:** 'Parcours Special', nickel

**Wood category:** 04

**Stock finish:** Epoxy

### **K-20 ProSporter**

**Barrel length:** 81 cm

**Choke tubes:** factory chokes

**Forearm:** 'Schmabel'

**ProSporter Stock with adjustable comb**

**Standard engraving:** 'Gold Renaissance', nitride finish

**Wood Category:** 05

**Gold plated trigger**

**Stock finish:** Epoxy

*HIGHEST EXAMPLE OF  
THE ENGRAVER'S ART*

*A Krieghoff competition shotgun is always a very personalized firearm.*

*For years, engravers have artfully applied the finishing touch to guns, lending them a unique character and an expression of their worth.*

*So, what could be more appropriate than underlining the uniqueness of a Krieghoff 'K' with the aura of an artistic engraving?*

*The following pages will give you a sense of the available options and some ideas for creating your dream Krieghoff 'K'.*

## KRIEGHOFF'S ENGRAVING STUDIO TRANSFORMING AN IDEA TO ART.

*The unadorned surfaces and contours of the K-80 offer a generous – and superb – canvas for creating engravings of every style and type.*

*The large selection of standard engraving motifs shows the endless creative options for embellishing the K-80.*

*Many shooters make the K-80 their very own competition shotgun by expressing their individual tastes; of course, the engraving is a fundamental part of this.*

*Krieghoff's engravers develop the one-of-a-kind overall design of each shotgun from your basic concept, without compromising stylistic integrity.*

*Initial sketches stemming from a dialogue with the gun owner are used to produce a harmonious design encompassing motif, style and material.*

*Krieghoff engravers have a comprehensive repertoire: from deep relief to the very finest Bulino style and from classic hunting scenes to the multifaceted ornamentations of various eras. From precious metal inlays to surface finishing - there are no limits to their creative imagination.*

*Using their experience, finesse and talent, our engravers create fine works of art that reflect both the passion and personality of the owner and the value and quality of an exquisite gun.*

*Customized version of the 'Crown Grade' standard engraving: Lifelike wildfowl scenes, expressed in gold relief reflect the drawing talents of the artist. The main scene contrasts with a finely detailed Bulino-style background.*

*The medallion is completely framed by arabesques with a chiseled base and a fine gold contour. The detailing covers all other metal parts, including the breech plate, trigger guard and forearm catch.*

# ENGRAVING CATALOG

The extensive collection of standard engravings for the K-80 and the K-20 covers a wide range of attractive motifs. A selection of the most popular designs are shown in the following pages. Common to all engravings produced in Krieghoff's engraving studio is the perfect craftsmanship of each design. All engravings are created directly on the action case. Fans of pure ornamental engravings or of lifelike scenes can choose their dream engraving from a wide variety of design grades. The repertoire of styles encompasses satin stitch engravings, animated reliefs, fine Bulino work or precious metal inlays. Depending on the engraving motif, the receiver surface is either nicked, color case hardened, nitride finished or blued.

The design options listed in Krieghoff's price list often combine selected engravings with corresponding stock wood grades.

## CUSTOM ENGRAVINGS

*'The only way to get rid of temptation is to yield to it – who knows if it will return.'* (Oscar Wilde)

The possibilities are endless when it comes to custom engraving options. Whether you would like to feature your trusted retriever or scenes that relive moments from history, Krieghoff will work with you and your dealer to create a masterpiece that will be a treasure of a lifetime.

Since 1999 Krieghoff has annually given one special gun the prestigious title of Gun of the Year. The gun of the year is as much a piece of art as it is a working firearm. This distinguished honor affords the master engraver and opportunity to show off their talent and expertise.

For 2012 the 'Freedom Gun' by Gregor Stögner was selected to receive this honor. The deep relief engraving featured to the right, highlights scenes from various times in American history, including the signing of the Declaration of Independence, American soldiers from three wars and the Statue of Liberty with the flame of her torch shining through in gold.

## CUSTOM ENGRAVINGS

The 125<sup>th</sup> Anniversary K-80 'Waters of the Chesapeake' builds a bridge between Krieghoff's two core elements: hunting and sport shooting. Pictured is a unique composition of pintail and mallard ducks in their native Chesapeake Bay waterscape, an area known as a premier waterfowl hunting destination.

The 2007 Gun of the Year, 'Gold Rush', features deep relief engraving, done by Master Engraver Gregor Stögner. The receiver highlights the passion and drive that fuelled the American Gold Rush.

*CUSTOM ENGRAVINGS*

*Completely covering, very fine 'English arabesques' with spectacular wildfowl scenes integrated into the ornament. Harmonious art deco complements the breech plate, trigger guard and forearm.*

*Four different golds – yellow, white, green and red – create the background for the Bulino style horses to be brought to life on the receiver sides. Very special accents of flora and foliage applied in enamel and artistically glazed into the finish border the bold horses.*

*CUSTOM ENGRAVINGS*

*Gold upland game birds, prominently featured, compliment the elegant gold accented scroll and floral ornamentation*

*Elegant scroll compliments the unique personalization of this highly engraved receiver. The prominently featured piece of equipment shows that the limits of engraving options are only in the imagination.*

*We continuously work to enhance our competition shotguns.  
We therefore ask for your understanding when we advise that  
features and technical aspects may not be exactly as those  
shown in this catalog.*

*Guns may only be purchased by those in possession of a valid  
firearm permit.*

*Photography: Thomas Kärcher, Ralf Kröling, Ralf Müller,  
Ppsstudios, Yorck Dertinger and Lynne Green.*
